Giovanni Lauda

Year  
2011

## Description

Dina is a small table lamp that offers diffused light. It is a bedside lamp made with polycarbonate and is installed on an aluminium structure. On/off and dimmer functions by means of a touch sensor on the base.

This "ordinary" shape hides a LED source.

The diffuser, either translucent or chromed, turns transparent when the light is switched on and reveals the absence of a traditional bulb, just like magic.

It's light is warm and soft, making it perfect as a bedside, desktop or living-room lamp.

## Materials

The polycarbonate diffuser is assembled on an aluminium body. On/off and dimmer functions by means of a touch sensor on the base. This "ordinary" shape, hides a LED source. The translucent or chromed diffuser, turns transparent when the light is switched on and reveals the absence of a traditional bulb, just like magic. The light is soft and warm and is perfect as a bedside, desktop or living-room lamp.
