

# Eye Ball T1

Design  
Jae Kyu Lee

Year  
2004

## Description

EyeBall is a suspension and a table lamp. The shape of the glass derives from the research on the complexity of a surface with no beginning and no end, a characteristic that makes the lamp always look different, depending on the angle of observation. The diffuser is made of free blown and etched opal ply glass, with a stable mould technique. The support of the diffuser, formed of two interlocked parts fastened onto the glass, is made of injection moulded polycarbonate, and can either be transparent or coloured. The table lamp is set on an easel made of a metal rod, which is fastened onto the polycarbonate support; it is also fitted with a cord dimmer.

## Materials

Hand blown flashed opaline glass diffuser light; injection moulded polycarbonate transparent or coloured diffuser support. Transparent power cable with dimmer.

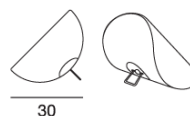

## Certifications

CE IP20

## Uses

Table

## Dimensions

## Light bulbs

1xE27 max 70W HSGST-C-UB  
Halogen ECO
