

Goccia H1

Design
Andrea Branzi

Year
2003

Description

Goccia is a suspension lamp that gives diffused light. Its shape is similar to that of a drop, a pendent, or a jewel, and is originated by the two overlapping glass elements, which maintain the elegance and compact aspect of the object. The cone-shaped upper part is placed in the rosette, which simulates a mirrored reflection on the ceiling. Goccia comes in two dimensions; it is entirely made of free blown glass, and can either have a glossy or satin texture. The inner structure is made of chrome metal. Thanks to iconic shape of great personality, Goccia is perfect both alone or in clusters; it will give character and originality to any type of environment.

Materials

Handblown, double skinned opaline glass diffuser; chromed metal internal structure with teflon spacer element; transparent power cable and handblown, double skinned opaline glass ceiling fitting.

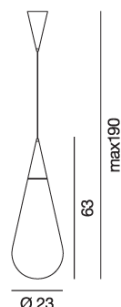

Certifications

CE IP20
