

MultiBook

Design
Dante Donegani,
Giovanni Lauda

Year
2007

Description

MultiBook is the reinterpretation of a book shape in a multifunctional product. Being both a lamp and an alarm clock, MultiBook is an inseparable companion; whether placed on a book shelf or next to the bed it can host all the electronic objects that surround us. The pages diffuse the light of 74 LEDs. Inside the book are a multi-socket and enough space to hold all necessary wires. The digital numbers of the alarm clock and date appear on the side of the book. The label on the jacket can be personalised with photograph, a dedication. The inspiration for the decoration was taken from the miniature "illuminated books" of the Middle Ages.

Materials

Injection moulded coloured polycarbonate structure with injection moulded opal ABS diffuser; 3-way European standard multisolet; alarm clock and digital date; 74 LED diffused light lamp; on/off switch at the back.

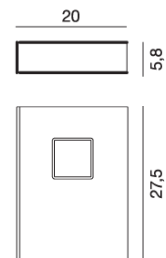

Certifications
